

## **THROW AWAY THOSE JUMPER CABLES!**

*You won't need them...*

*If you protect your battery with **PriorityStart!***

**Mobility ProMax**

The new **Mobility ProMax PriorityStart!** is specially designed for mobility applications and replaces the need for dual batteries. If any electrical load has been left on, when the key is turned off, **PriorityStart!** monitors, detects and automatically disconnect any drain while maintaining starting power and protecting the battery from irreparable damage. Automatically reconnects by operating the headlight switch or operating any installed external switching device, and the vehicle starts. The new **PriorityStart!** configuration provides the driver a safety margin of over four minutes to get into the vehicle and be in position to start the vehicle.

**Always on Duty - Always Remembers - Providing Safety and Peace of Mind.**

 The **Mobility ProMax PriorityStart!** is being reintroduced with major improvements/changes to the computer microprocessor, and a new stronger (30% stronger) redesigned electrical mechanical gear drive system. In addition, the mobility units now have a surge, "spike" protection circuit.

 Using portable battery starters, dangerous jumper cables or questionable cigarette lighter devices means you already have a dead battery and permanently damaged your battery, potentially damaging the vehicles computer and electrical system and costing hundreds to repair. The first time you have a dead battery you've lost up to 1/2 its starting life and done irreparable battery damage.

 A dead battery also means that you may have found yourself in a potentially dangerous situation, stranded, unable to start your vehicle. **PriorityStart!** maximizes battery life preventing electrical damage, avoiding loss of money, time, and exposure to dangerous situations.

 Universal design fits top post or side post batteries. Fits any 12-volt application. No hard wiring. Four USA issued patents. No similar product on the market.

 No waiting for emergency trucks, or calls for help. Stay safely inside your vehicle. No lifting hood or attaching dangerous jumper cables. Pays for itself first time used. Ready to protect every time you need it.

 One-year warranty. Shock/vibration protected. Hermetically sealed. Maximizes battery life.

**Mobility ProMax**

24 volt and Marine **PriorityStart!** units also available

### **3 Easy Connections**

1. Vehicle Positive cable to **PriorityStart!**
2. **PriorityStart!** cable to battery positive post.
3. Attach ground wire.

**PriorityStart!**  
**Stops Dead Batteries  
Automatically**

**NO HARD WIRING REQUIRED**
